

(a) Direct queries: same held-out people

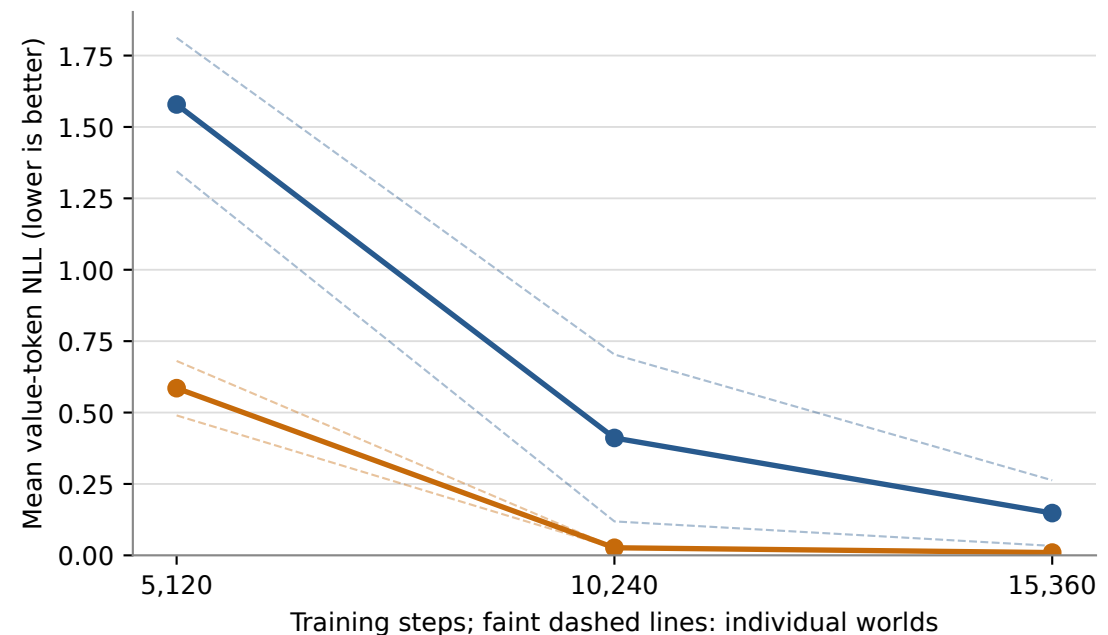

(b) Original exceptions: endpoint answers

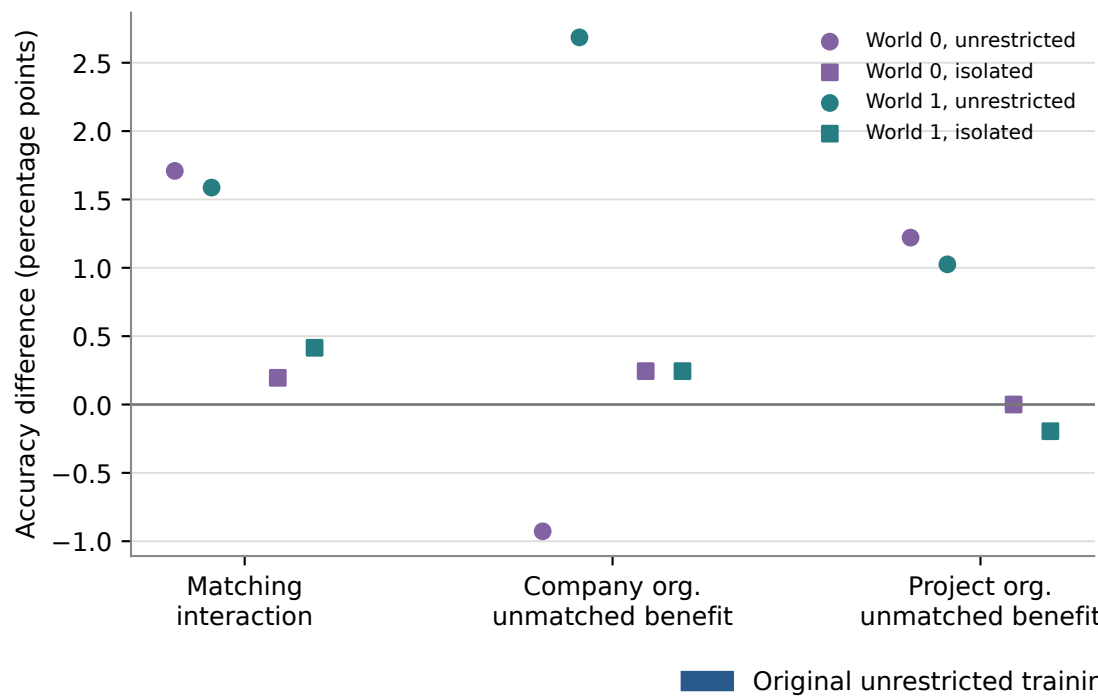

(c) Original exceptions: facts and composition

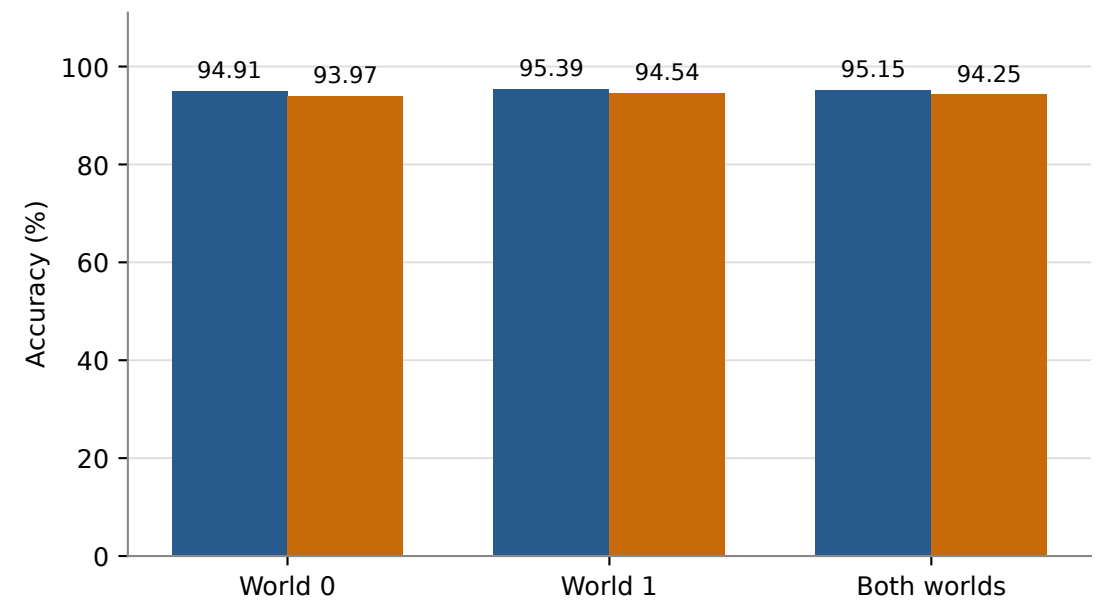

(d) Independent base facts: NLL

(e) Organization effects: all held-out queries

(f) Endpoint direct accuracy: all held-out queries

7.58M parameters; 12 paired models; both query relations and worlds retained. Case means; no confidence intervals.
 Same low-exception world, targets and training budget; inference remains unrestricted. Autonomous two-step measured only at 15,360 steps.
